

## MKS Sustainability Consulting Services

### Greenhouse gas and waste analyses

**Need help developing your first greenhouse gas emissions inventory? Or updating an existing inventory to be a better decision-support tool? Wondering how to forecast future emissions and emissions reductions? Wanting to understand your waste stream and how different actions could contribute toward zero waste?**

**More about the service** I help clients understand their waste and greenhouse gas emissions by sector historically, today, and into the future. I ensure each customer's annual diversion data or emissions inventory and forecasts are designed to meet their goals, whether that's to get a simple snapshot every few years, be quickly responsive to on the ground changes, look beyond traditional scopes or geographic boundaries, make decisions about policy and programming, illustrate strategic pathways to goals, and more. Here are some project types on offer:

- Develop or update diversion tracking and forecasting
- Develop or update annual greenhouse gas emissions inventory
- Develop or update greenhouse gas emissions forecast
- Improve sector data for better insights
- Project greenhouse gas or waste reduction potential of specific actions
- Gain additional insights from your existing data to better tell your story (e.g. what's making the biggest difference, what would your progress look like if your community hadn't grown, etc.)

**Project examples** City of Fort Collins Community Inventory; City of Fort Collins Municipal Inventory and Forecast; Fort Collins Community Waste Diversion Tracking
